Isolation Precautions for Adult Patients

Contact and Droplet Isolation Precautions

What are contact and droplet precautions?

What should I do before visiting a patient on contact and droplet precautions?

What should I do before I go into the patient’s room?

1. Wash your hands.
2. Wear a mask and gloves.
3. Wear a gown.
4. Cover your mouth and nose with a surgical mask.
5. Use a mask and gloves.
6. Wear a gown.

What should I do if a patient is on contact and droplet precautions?

How do I know if a patient is on contact and droplet precautions?
(What should I do when I leave the patient's room?)

- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.

(How else can I stop germs from spreading?)

- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.

(How can I stop germs from spreading?)

- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
- You must be able to follow contact and droplet precautions when you leave the patient's room.
